

Unique Pumps & Seals

TRASH PUMPS

Solids handling combined with trouble free operation makes these pumps invaluable in the market.

- Automatic re-priming due to large volute casing capacity
- Easy accessible inspection cover to clear blockages quick and efficiently
- Impeller designed specifically for pumping large solids
- Entire rotating assembly can be removed from the casing in one go. Excellent for quick rotating assembly swap with minimum downtime
- Specially designed internally mounted grease lubricated mechanical seal for positive sealing.
 - Super tough tungsten faces or extremely hard. Silicon carbide faces are fitted as standard. Other seals on request.
- Internally mounted rubber suction check valve prevent backflow when the pump stops.
- Multiple drive options, from direct drive, to variable Frequency drive, to V belt drive are available.
- Fully interchangeable with similar pumps.
